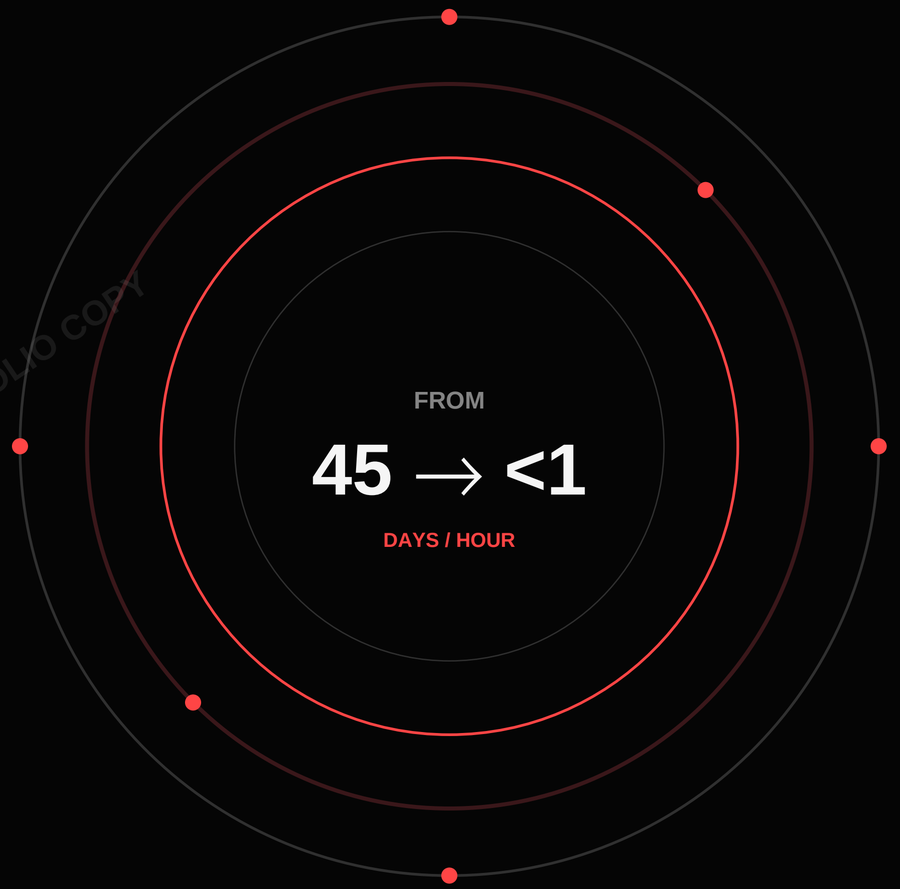
Compressing a 45-Day Marketing Workflow to Under an Hour

Turning AI from an ideation assistant into a practical execution advantage through workflow redesign.

DOCUMENTED TURNAROUND

45 DAYS → < 1 HOUR



SHIVANKUR GHOSH | PORTFOLIO COPY

A WORKFLOW-LEVEL RESULT - NOT A CLAIM THAT EVERY CAMPAIGN TAKES UNDER AN HOUR

A dramatic change in elapsed execution time.

The documented turnaround for the relevant workflow moved from approximately 45 days to under one hour.

45 DAYS

BEFORE / DOCUMENTED TURNAROUND

< 1 HOUR

AFTER / DOCUMENTED TURNAROUND

SCOPE NOTE

This result applies to the specific workflow measured. It does not establish that all marketing projects or end-to-end campaigns can be completed within an hour.

The bottleneck was the system of work.

Traditional execution can stretch across people, tools and production stages. Repetitive work and manual handovers compound the elapsed time.

01
COORDINATE
Dependencies across people and tools

→

02
GATHER
Collect and organise required information

→

03
CREATE
Develop content and production inputs

→

04
REVIEW
Move through review and handovers

→

05
DELIVER
Turn the requirement into an executable output

SHIVANKUR GHOSH | PORTFOLIO COPY

THE OPPORTUNITY Reduce the distance between a requirement and an executable deliverable without losing sight of the intended output.

Treat AI adoption as workflow design.

The core move was not to add a tool to an unchanged process. It was to rethink the path from input to output.

SHIVANKUR GHOSH | PORTFOLIO COPY

01 IDENTIFY THE BOTTLENECK

Examine which activities contribute disproportionately to turnaround time.

DIAGNOSE

02 INTEGRATE AI

Apply AI-assisted methods where they can accelerate execution and reduce manual effort.

APPLY

03 SIMPLIFY THE PATH

Reorganise work to reduce unnecessary repetition and handovers.

REDESIGN

04 MAKE IT REPEATABLE

Create a workflow that can be reused for similar requirements.

REUSE

DESIGN PRINCIPLE

Accelerate the workflow, not just one isolated task.

Less friction between brief and execution.

A streamlined operating pattern connects the requirement, AI-assisted execution, and a reusable route to delivery.

01
INPUT
Requirement and relevant context

→

02
FOCUS
Identify the actual bottleneck

→

03
EXECUTE
Use AI-assisted methods where they help

→

04
SIMPLIFY
Remove unnecessary repetition and handovers

→

05
REUSE
Capture the pattern for similar work

SHIVANKUR GOSAIN | PORTFOLIO COPY

THE OPERATING SHIFT

From manually coordinating every stage to a more direct, AI-assisted and reusable process.

Illustrative workflow logic based on the documented approach; specific tool-by-tool steps were not provided.

The leverage comes from combining three disciplines.

AI creates the most value here when paired with process optimisation and an intentional bias toward repeatability.

SHIVANGI GHOSH | PORTFOLIO COPY

01

AI-ASSISTED EXECUTION

Use technology as a practical execution tool, not only as an ideation assistant.

02

PROCESS OPTIMISATION

Reduce repetitive manual work and simplify the sequence of execution.

03

REPEATABLE OPERATIONS

Turn a one-off improvement into a pattern that can support similar requirements.

THE INSIGHT

The win is not simply generating faster. It is designing a system in which less effort is lost between stages.

A workflow-level proof point with room to scale.

The documented result shows the potential of combining AI-assisted execution with process redesign.

DOCUMENTED ELAPSED TURNAROUND

45 DAYS → < 1 HOUR

A substantial reduction in elapsed time for the relevant workflow.

SHIVANKUR SINGH | PORTFOLIO COPY

WHAT THIS ENABLES

- More responsive execution for similar requirements
- Less repetitive manual effort in the workflow
- A more reusable operating pattern
- AI applied to a practical business process

ATTRIBUTION GUARDRAIL

The result is specific to the workflow measured. No claim is made that every campaign or marketing project now takes under an hour.

A commercial capability, not a one-off trick.

The approach combines marketing operations judgement with practical use of AI and disciplined workflow design.

SHIVANKUR GHOSH | PORTFOLIO COPY

01 AI-ENABLED WORKFLOW DESIGN

Applying AI at the point of practical leverage.

02 BOTTLENECK IDENTIFICATION

Locating activities that extend turnaround time.

03 PROCESS OPTIMISATION

Reducing repetitive work and unnecessary handovers.

04 MARKETING OPERATIONS

Thinking across the full execution path.

05 RAPID PROTOTYPING

Testing a faster route from requirement to output.

06 REPEATABLE SYSTEMS

Making useful patterns available for similar work.

The repeatable asset is the workflow itself: a clearer path from business requirement to executable delivery.

THE MASTER MOVE

The advantage is not more AI.

It is less distance between brief and execution.

SHIVANKUR GHOSH | PORTFOLIO COPY

THE REPEATABLE RECIPE

01 DIAGNOSE → 02 REDESIGN → 03 APPLY AI → 04 CODIFY

A documented turnaround improvement for one relevant workflow - with repeatability as the next source of leverage.
