CASE STUDY 13 / RESEARCH PROPOSAL

THE FEAR FACTOR

Emotion, decision-making & behavioural programming

A proposed investigation into how fear and related emotional triggers may shape consumer attention, perceived risk, evaluation and action.

PROJECT STATUS

RESEARCH PROPOSAL / NOT EMPIRICALLY VALIDATED

INDEPENDENT RESEARCH PROPOSAL

Not affiliated with NoBroker Loans

Consumer choices are not purely rational

The proposal begins from the premise that emotional responses can influence how people interpret information, perceive risk, evaluate alternatives and decide whether to act.

SHIVANKUR GHOSH | PORTFOLIO COPY

CENTRAL PREMISE

Emotion may shape what a consumer notices, how they interpret a message and which options feel safe, urgent or worth pursuing.

The aim is not to assume that emotion determines behaviour, but to investigate how emotional cues interact with context and individual differences.

01 **ATTENTION**

What becomes salient?

02 **APPRAISAL**

How is risk interpreted?

03 **ACTION**

What response follows?

IMPORTANT DISTINCTION Emotional influence is a question to investigate, not a universal or predetermined effect.

The same emotional cue can lead to different responses

Fear-based communication may attract attention or motivate action in some circumstances, while producing avoidance, scepticism or resistance in others.

SHIVANKUR GHOSH | PORTFOLIO COPY

POSSIBLE RESPONSE A

Approach

The message may make a risk feel salient and encourage information seeking, evaluation or action.

- Attention
- Risk recognition
- Action or inquiry

POSSIBLE RESPONSE B

Avoidance

The same message may instead feel manipulative, overwhelming or untrustworthy, leading to withdrawal.

- Scepticism
- Anxiety or resistance
- Delay or disengagement

RESEARCH GAP TO EXPLORE: WHEN, FOR WHOM, AND UNDER WHAT CONDITIONS?

Three connected areas of inquiry

Together, these lenses create a starting framework for investigating the relationship between marketing stimuli, emotional responses and consumer action.

SHIVANKUR GHOSH | PORTFOLIO COPY

01

EMOTIONAL TRIGGERS

How fear and related emotions may influence attention, interpretation and evaluation.

FOCUS / EMOTION

02

DECISION MECHANISMS

How emotional responses may relate to perceived risk, comparison and consumer choices.

FOCUS / APPRAISAL

03

BEHAVIOURAL PROGRAMMING

How repeated exposure, contextual cues and learned associations may contribute to patterns over time.

FOCUS / LEARNING

SCOPE NOTE These are proposed lines of inquiry, not established causal mechanisms or findings.

Five questions to guide empirical work

The proposed questions are intended to focus the research. Each would need clear constructs, suitable measures and a defined research design.

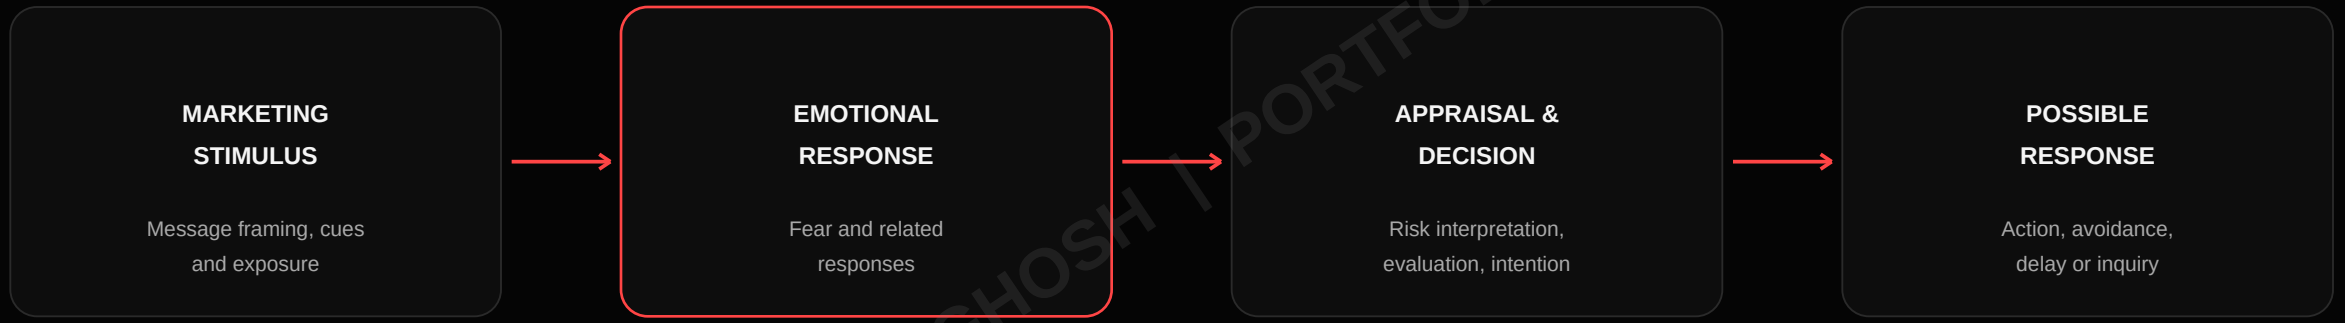

SHIVANKUR GHOSH | PORTFOLIO COPY

01	How do fear-related emotional triggers influence consumer evaluation and purchase intention?
02	Under what conditions does fear-based communication encourage action rather than avoidance?
03	How do individual differences and situational contexts affect responses to emotionally framed marketing?
04	What role might repeated exposure and learned associations play in shaping consumer responses over time?
05	How can insights into emotional decision-making inform more responsible and effective marketing?

NEXT STEP Translate broad questions into testable hypotheses only after the variables and methodology are specified.

A pathway to investigate, not a proven causal chain

The diagram organises the proposal's areas of interest. It is a conceptual scaffold for research design, not a validated model.

SHIVANKUR GHOSH | PORTFOLIO COPY

CONTEXTUAL FACTORS TO CONSIDER

- Individual differences
- Situational context
- Trust and credibility
- Repeated exposure / learned associations

Research design should define how each construct will be measured and what evidence would support or challenge the proposed relationships.

From psychological inquiry to responsible marketing

The potential value lies in understanding not only whether a message attracts attention, but how it affects interpretation, trust and subsequent behaviour.

SHIVANKUR GHOSH | PORTFOLIO COPY

BRAND COMMUNICATION

Consider whether emotional framing supports or undermines credibility.

ADVERTISING

Evaluate action, avoidance and longer-term response - not attention alone.

PRODUCT MARKETING

Understand how consumers interpret risk and compare alternatives.

CONSUMER INSIGHT

Explore how responses may vary by individual and situational context.

RESPONSIBLE APPLICATION

Emotional insight should support clear, proportionate and trustworthy communication - not presume that fear will reliably control behaviour.

From an interesting premise to a researchable study

The next stage would translate the broad direction into a feasible methodology and an appropriate plan for empirical validation.

SHIVANKUR GHOSH | PORTFOLIO COPY

01	**DEFINE CONSTRUCTS**	Specify what counts as fear, emotional response, perceived risk, intention and behaviour.
02	**SET BOUNDARIES**	Choose a product category, audience, context and communication formats.
03	**SELECT METHODS**	Determine suitable measures, comparison conditions, sample and data-collection approach.
04	**TEST RESPONSIBLY**	Address consent, participant wellbeing, privacy and the risk of distressing stimuli.
05	**ANALYSE WITH CARE**	Distinguish association from causation and account for alternative explanations.

STATUS No experiments, validated findings, publication or causal claims are represented in this case study.

A research proposal connecting behaviour and marketing

The Fear Factor documents a proposed line of inquiry into emotional triggers, consumer decision-making and behavioural programming.

SHUVANKUR GHOSH | PORTFOLIO COPY

PROJECT STATUS

RESEARCH PROPOSAL

No empirical findings claimed.

The ideas and relationships presented require a defined methodology, suitable measures and empirical validation.

CORE CAPABILITIES DEMONSTRATED

- Research problem formulation
- Consumer psychology and behavioural science
- Marketing research conceptualisation
- Research question development
- Behavioural marketing strategy
- Translating theory into practical questions

PORTFOLIO SUMMARY

The Fear Factor explores how fear and other emotional triggers may shape consumer decision-making, with the aim of connecting behavioural research to more informed marketing strategy.
