DIGITAL PRODUCT CONCEPT / PARTNER ENABLEMENT

Creating a More Structured Digital Experience for Lending Partners

Digital Partner Catalogue

A concept to make lending product information, payout structures and partner resources easier to find, understand and use.

01 INFORMATION ARCHITECTURE

Structured product and institutional information.

02 PAYOUT VISIBILITY

Calculator concept with percentages, slabs and estimated timelines.

03 PARTNER CONFIDENCE

Success stories and clearer access to resources.

PORTFOLIO CASE STUDY / The catalogue is described as a conceived/proposed experience. Benefits are intended, not measured deployment outcomes.

Partner information needs a clearer home.

Lending partners operate across institutions, products, payout structures and operational processes. When information is spread across channels and documents, finding the right detail can take unnecessary effort.

01

NAVIGATION

Find relevant product and institutional information.

02

PAYOUT CLARITY

Understand payout percentages, slabs and related timelines.

03

RESOURCE ACCESS

Reach useful partner resources without relying entirely on manual communication.

04

TRUST & PROOF

Find credible partner examples and success stories.

THE OPPORTUNITY

Bring recurring partner information needs into one structured, intuitive digital experience - designed to reduce search effort and improve clarity.

Design objective: improve access and usability. The source brief does not provide validated baseline metrics or measured outcomes.

Three principles shape the experience.

The concept is anchored in findability, transparent communication and partner confidence.

01

INFORMATION ARCHITECTURE

Organise product and institutional information into defined categories so partners can locate relevant details with minimal friction.

FIND

02

TRANSPARENCY & ACCESSIBILITY

Make payout percentages, slab details and estimated payout timelines easier to understand and access.

UNDERSTAND

03

PARTNER CONFIDENCE

Go beyond information delivery with useful resources, product opportunities and examples of partner success.

ACT

Product principle: make the next useful piece of information easier to find, compare and act on.

Organise the catalogue around partner tasks.

A simple structure can group information by institution, product and the task the partner is trying to complete.

01 INSTITUTIONS

Bank / lending institution overview and relevant partner information

↓

02 PRODUCTS

Home loans, balance transfer and other product information

↓

03 PAYOUT DETAILS

Percentages, slabs, eligibility notes and timeline guidance

↓

04 PARTNER RESOURCES

FAQs, operational updates, success stories and supporting material

NAVIGATION RULE

Group content by the questions partners need to answer, not by internal team ownership.

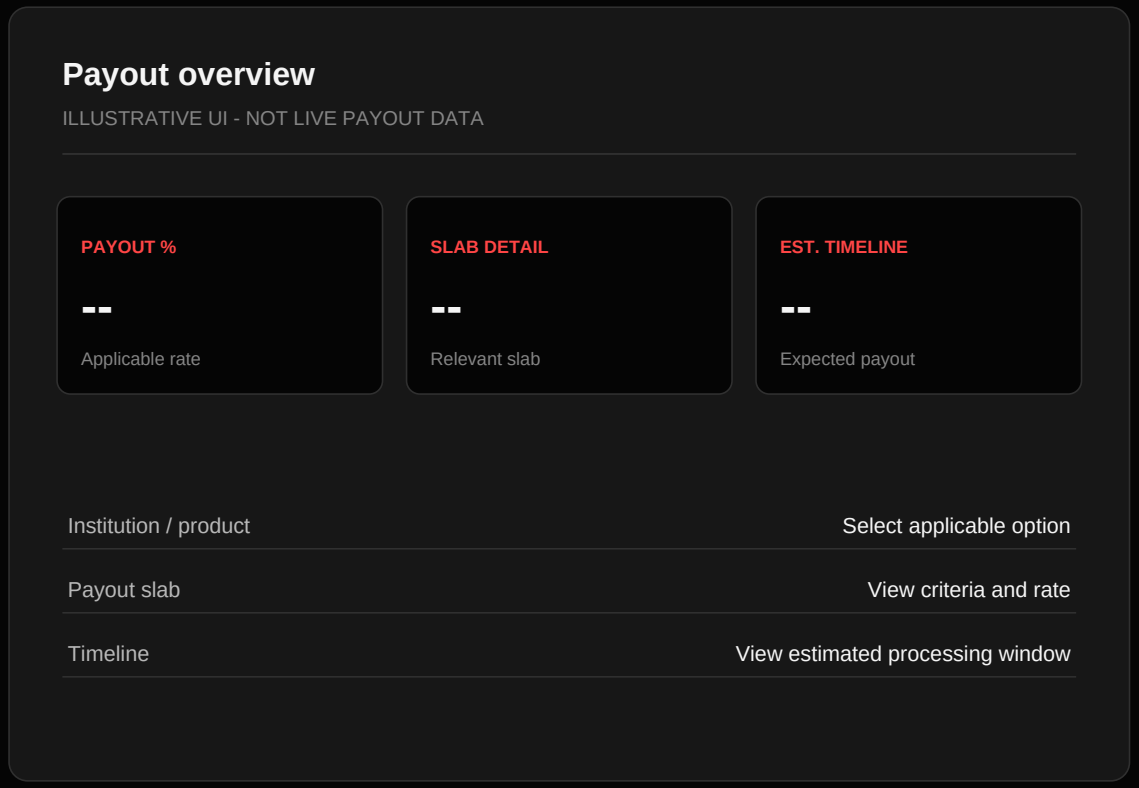
SCALABILITY RULE

Use a consistent information pattern so new institutions, products and resources can be added without redesigning the whole experience.

Illustrative information architecture based on the concept brief; exact site navigation and final product taxonomy remain to be validated.

Payout calculator: make the commercial details legible.

Proposed functionality to bring payout percentages, slab details and estimated payout timelines into one clear view.



WHY IT MATTERS

Visibility

Put key payout details in one place.

Comprehension

Use labels and definitions, not unexplained percentages.

Confidence

Show the basis and freshness of any estimate.

Trust

Clearly distinguish indicative timelines from confirmed commitments.

DESIGN GUARDRAIL

No actual payout rates or timelines are supplied in the brief. Use live, approved data only; the mockup uses placeholders.

Make proof and detail easy to scan.

Success stories add human context. Structured tables help partners locate the exact data they need.

PARTNER SUCCESS STORY

From activity to outcome

A concise story template can capture the partner context, the approach taken, and the practical learning.

CONTEXT	Who the partner is and what challenge they faced.
APPROACH	What actions, resources or product choices were involved.
LEARNING	What others can take away from the experience.

STRUCTURED DATA

A table should answer one question

INSTITUTION	PRODUCT	DETAIL
Institution A	Home loan	View details
Institution B	Balance transfer	View details
Institution C	Home loan	View details

Use consistent units, clear definitions, visible update dates and purposeful sorting/filtering.

Story examples and table entries above are illustrative layout examples, not claims about named partners or measured results.

Designed to enable better partner self-service.

The potential value is improved access, clarity and consistency. These are intended benefits, not measured outcomes from a validated deployment.

01 LESS SEARCH EFFORT

Reduce friction in finding partner information.

02 CLEARER PAYOUT VIEW

Increase visibility into payout structure and related detail.

03 CONSISTENT COMMUNICATION

Create a common presentation pattern for partner-facing information.

04 BETTER DISCOVERABILITY

Make products, resources and institutional details easier to locate.

05 SELF-SERVICE FOUNDATION

Create a base for future digital enablement.

06 SCALABLE STRUCTURE

Accommodate more products, institutions and resources.

CAPABILITIES DEMONSTRATED

- Digital product & experience strategy
- Partner enablement
- Information architecture
- Financial-services communication
- Data & information design
- Feature prioritisation

Better access to information
can create a better partner experience.

The Digital Partner Catalogue concept brings product information, payout visibility and partner resources into a more structured digital environment.

01 STRUCTURE

Organise institutional, product and resource information around partner needs.

02 CLARITY

Present payout details and tables in a format partners can read and understand.

03 ENABLEMENT

Use stories and self-service resources to support partner confidence and productivity.

NEXT VALIDATION STEP

Validate partner tasks and information needs, then prototype the catalogue and payout calculator with real partner feedback before treating the concept as deployed functionality.

This deck describes a concept and intended benefits based on the supplied brief. It does not assert that the features were deployed or that outcomes were measured.
