STRATEGY PROPOSAL / CUSTOMER EXPERIENCE × OPERATIONS × TALENT

A better business behind the brand.

A strategic review of Radiant & Glamorous, with a proposed roadmap for customer journey design, service delivery and professional-network growth.

CORE THESIS

A polished digital presence is not a competitive advantage by itself. The business must make the customer's path easier, deliver consistently offline, and give professionals a compelling reason to join and stay.

01 / THE CENTRAL THESIS

The risk is a weak value proposition, not just a weak website.

If customers can achieve the same outcome through a free alternative with less effort, the business needs a clear reason to exist. More steps, more coordination or a new interface are not value on their own.

01	02	03
Differentiation	**Friction**	**Delivery**
What does the customer get here that they cannot get more easily elsewhere?	How many steps sit between customer intent and a confirmed, completed service?	Can the offline experience reliably deliver the promise made online?

Working hypothesis: the business should validate differentiation and demand before investing heavily in technology or acquisition.

02 / DIAGNOSIS

Three failure modes to test

These are strategic hypotheses based on the concerns raised, not verified findings from a complete technical or commercial audit.

VALUE GAP	PROCESS FRICTION	DELIVERY GAP
If a free alternative is sufficiently convenient, why would customers switch or pay?	If the journey requires too much coordination, customers may abandon before booking or service.	If the offline team operates inconsistently, a better website simply moves the problem downstream.
Test: compare alternatives, customer willingness to pay and repeat intent.	**Test:** map steps, time-to-book, abandonment and appointment completion.	**Test:** audit service delivery, complaints, delays and follow-up quality.

Decision rule: do not scale acquisition until the value proposition, customer journey and service operations have passed a small pilot.

Build a low-friction booking journey

The proposed digital CRM should reduce coordination, not create another layer of work.

01	**DISCOVER**	Clear service categories, provider profiles, pricing guidance and proof of quality.
02	**SELECT**	Choose a service and relevant professional with transparent availability.
03	**SCHEDULE**	Select a date and time slot; show confirmation and any preparation requirements.
04	**COMPLETE**	Send reminders, make rescheduling straightforward and capture service status.
05	**FOLLOW UP**	Collect feedback, resolve issues and encourage repeat bookings when appropriate.

MVP first: a reliable booking and customer record workflow. Add automation only where it removes proven friction.

One operating view of every customer

CORE CAPABILITIES

- **Customer record:** contact details, preferences, service history and consent.
- **Time-slot selection:** provider availability, booking confirmation and rescheduling.
- **Workflow:** lead status, assigned owner, reminders and follow-up tasks.
- **Communications:** confirmations, preparation instructions and post-service feedback.
- **Management view:** bookings, no-shows, response times and repeat visits.

DESIGN PRINCIPLES

- Make the next action obvious.
- Avoid asking customers for the same information twice.
- Keep availability accurate and easy to change.
- Capture only data needed to deliver the service.
- Build around real staff workflows, not technology for its own sake.

A CRM is the coordination layer. It is not the value proposition, and it cannot substitute for good service.

Make the offline experience repeatable

Document the service standard, train to it, observe performance and improve it. SOPs should support judgement, not turn service into a script.

STAGE	STANDARD TO DEFINE
BEFORE	Confirm booking, assigned professional, location, preparation needs and required equipment.
ARRIVAL	Acknowledge the customer, explain the process, confirm expectations and communicate any delay.
DELIVERY	Follow discipline-specific safety, hygiene, consent and professional conduct requirements.
CLOSE	Explain aftercare or next steps, confirm completion and handle payment or documentation transparently.
FOLLOW-UP	Request feedback, resolve concerns, record outcomes and identify appropriate repeat-service opportunities.

Enablement loop: train → role-play → observe → coach → audit → refresh. Assign an owner for every SOP and escalation path.

Build the professional network deliberately

Create an onboarding engine for tattoo artists, models, photographers and professionals across the cosmetics and beauty industries.

TATTOO ARTISTS	MODELS	PHOTOGRAPHERS	BEAUTY & COSMETIC PROS
Portfolio, style, experience, hygiene and consent standards.	Portfolio, profile, availability, work preferences and clear boundaries.	Portfolio, specialisms, equipment, rates and project availability.	Discipline, qualifications where relevant, services, availability and safety standards.

Potential campus channels

- Colleges and programmes in cosmetology, fashion, photography, design, media and related creative disciplines.
- Portfolio review days, guest workshops, student ambassadors and industry networking sessions.
- Clear, honest communication about fees, commissions, selection criteria, work availability and professional expectations.

From registration to active professional

01 ATTRACT

Campus partnerships, referrals, workshops and professional communities.

02 REGISTER

Digital profile, discipline, portfolio, location, rates and availability.

03 VERIFY

Identity and portfolio checks; credentials or references where appropriate.

04 PREPARE

Platform orientation, service standards, safety, consent and conduct training.

05 ACTIVATE

Complete profile, publish availability and match to suitable opportunities.

06 RETAIN

Feedback, repeat work, learning opportunities and professional progression.

Do not treat every profession as interchangeable. Use one shared platform with profession-specific onboarding, verification and safety requirements.

Connect demand, supply and service quality

CUSTOMERS	PLATFORM / CRM	PROFESSIONALS
Discover → choose → book → receive service → review	Profiles → availability → matching → reminders → records → feedback	Register → verify → onboard → accept work → deliver → grow

Strategic choice to resolve

Is Radiant & Glamorous primarily a service provider, a marketplace connecting customers with professionals, or a talent network that also facilitates services?

The answer changes the revenue model, operating costs, quality-control requirements and what the platform must do first.

Recommended principle: one connected ecosystem, but a clearly defined primary business model.

09 / MEASUREMENT

Measure outcomes, not activity

Set baselines during the pilot. Targets should follow observed performance rather than be invented in advance.

AREA	METRICS TO TRACK	WHAT IT TELLS YOU
Customer journey	Visit-to-booking conversion, booking completion, time-to-book, abandonment	Whether the journey is simple and compelling
Appointments	Confirmation rate, attendance, cancellations, no-shows, rescheduling	Whether scheduling works operationally
Service delivery	Wait time, complaints, satisfaction, resolution time, repeat bookings	Whether the experience meets the promise
Talent funnel	Registration-to-verification, profile completion, activation, first booking, retention	Whether recruitment becomes an active network
Business health	Contribution per completed service, repeat rate, acquisition cost, provider utilisation	Whether growth is economically sustainable

Guardrail: registrations and website traffic are not success if customers do not complete services and professionals do not receive meaningful opportunities.

Prove the model before scaling it

PHASE	PRIORITY	DELIVERABLES	GATE TO PROCEED
1. Diagnose	Understand the current journey and business model	Customer interviews, competitor/free-alternative comparison, journey map, service audit	A specific, testable value proposition
2. Standardise	Make delivery consistent	Core SOPs, staff training, escalation paths and baseline measurement	Minimum service standard is repeatable
3. Pilot CRM	Remove proven friction	Basic customer records, time-slot selection, confirmations and feedback	Improvement in completion and service metrics
4. Pilot talent	Build a relevant initial network	Small campus cohort, profession-specific onboarding and activation support	Active professionals and real completed work
5. Optimise	Scale what works	Analyse funnel and unit economics; improve workflows; expand partners selectively	Sustainable demand, quality and economics

Do not start by building the most sophisticated platform. Start by proving what customers value, what professionals need and what operations can consistently deliver.

THE RECOMMENDATION

Make the experience the competitive advantage.

A stronger Radiant & Glamorous would not depend on a website alone. It would be built on three connected capabilities:

01 A differentiated, low-friction customer journey.

02 An offline operating model that consistently delivers on the promise.

03 A trusted, active network of professionals with a clear path from onboarding to paid opportunity.

FIRST DECISION

Define the primary business model and validate the value proposition. Then pilot the customer workflow, service SOPs and talent onboarding as one connected system.

Prepared as a strategic proposal based on the concerns and recommendations discussed. Website pages were not text-readable in the available browser view, so this is not presented as a verified full-site audit.
